

IPH DIGITAL MANAGEMENT SYSTEM

A Centralized Platform for Integrated Services

Institute of Public Health, Namkum, Ranchi
Health, Medical Education s Family Welfare Department

1. PURPOSE OF DOCUMENT

This document defines the complete in-scope functionalities, modules, features, and operational coverage of the Integrated Room Management System (IDMS) platform. It serves as a formal agreement of what will be delivered within the project scope.

2. PROJECT OVERVIEW

The Integrated Room Management System (IDMS) is a centralized, cloud-based platform designed to digitize and streamline the booking and management of institutional facilities. The system ensures real-time visibility, automated workflows, and efficient utilization of infrastructure.

3. IN-SCOPE MODULES

The following modules are INCLUDED within the scope of this project:

3.1 IPH DIGITAL MANAGEMENT SYSTEM

3.2 In-Scope Features:

- Centralized booking dashboard
- Real-time room availability tracking
- Online reservation request system
- Automated approval workflows
- Notification and reminder alerts (Email C SMS)
- Booking calendar and scheduling system
- Role-based secure authentication
- Reporting and analytics dashboard

In-Scope Workflow:

1. User authentication
2. Search room availability
3. Select date and time slot
4. Submit booking request
5. Administrator approval/rejection
6. Booking confirmation notification

3.3 Visitor Management System (VMS)

In-Scope Features:

- Digital visitor registration
- QR / ID-based check-in system
- Host approval mechanism
- Visitor badge generation
- Real-time visitor tracking
- Security and access control
- Visitor activity logging

3.4 Learning Management System (LMS)

In-Scope Features:

- Course creation and management
- Video lectures and digital learning materials
- Assignment and assessment tools
- Student progress tracking
- Automated grading system
- Certification management
- Communication and discussion forums

3.5 Library Management System (LSM)

In-Scope Features:

- Digital catalog management
- Book search and availability tracking
- Issue and return management
- Barcode / RFID integration
- Late fee calculation
- Member management
- Inventory monitoring

3.6 Reservation and Booking Management System (RBMS)

In-Scope Features:

- Real-time availability tracking
- Online booking requests
- Automated approval workflows
- Booking calendar management
- Notification alerts
- Booking modification and cancellation
- Reservation history tracking

4. FACILITY TYPES COVERED

The system will support booking and management of the following facility types:

Large Venues

- Auditoriums
- Conference halls
- Event spaces

Educational Spaces

- Classrooms
- Lecture halls
- Training rooms

Meeting Facilities

- Meeting rooms
- Board rooms
- Discussion spaces

Accommodation

- Single rooms
- Dormitories
- Residential facilities

5. OPERATIONAL FEATURES

The following operational tracking and automation features are included:

- Power backup monitoring (Generator usage tracking)
- AC usage tracking (ON/OFF duration)
- Electricity consumption monitoring
- Equipment usage tracking (projectors, audio systems, etc.)
- Room occupancy time tracking
- Automatic service cost calculation

6. SYSTEM CAPABILITIES

- Cloud-based access (anytime, anywhere)
- Multi-user role-based access control
- Real-time synchronization of booking data
- Centralized data management
- Scalable infrastructure for multi-location deployment

7. BUSINESS BENEFITS

- Improved infrastructure utilization

- Reduced administrative workload
- Faster booking process
- Transparent scheduling system
- Elimination of double bookings
- Cost reduction through automation

8. APPLICABLE USE CASES

The system will support the following institutional environments:

- Government offices
- Universities and colleges
- Training institutes
- Research centers
- Conference facilities
- Corporate offices

G. TERMS s CONDITIONS

- Electricity and generator charges are excluded from base cost
- Reservations are subject to availability
- Advance cancellation is mandatory
- Usage restricted to working hours unless approved
- Damage to property must be compensated
- Unauthorized writing/posters are prohibited
- Visitor authorization documents required
- Payments via RTGS / PFMS / NEFT only
- Discipline must be maintained within premises

10. OUT-OF-SCOPE

The following items are NOT included in the current project scope:

- Mobile application (future enhancement)
- AI-based scheduling optimization
- IoT-based smart room integrations
- Advanced predictive analytics dashboards

11. CONCLUSION

This In-Scope document defines the complete deliverables and functional coverage of the IDMS platform. Any feature, module, or functionality not explicitly mentioned in this document shall be considered out of scope unless formally agreed upon through change management.
